

New York State Green Jobs Survey Finding #2: Green Employment

Statewide, by Industry Cluster, for 2010 4th Qtr

Statewide	Construction Trades	Building Services	Professional Services	Component Manufacturing
Green Employment	76,600	65,770	31,490	5,360
Cluster Employment	226,020	211,460	138,600	80,450

Statewide, there are nearly 180,000 green workers in these four clusters alone.

Among selected industry clusters, Construction Trades not only has the greatest number of workers (226,020), but also the greatest number of green workers¹ (76,600) and the highest incidence of green employment (34%).

Workers engaged in green economic activity make up 31 % (65,770) of Building Services' total employment of 211,460 and 23% (31,490) of Professional Services'² total employment of 138,600.

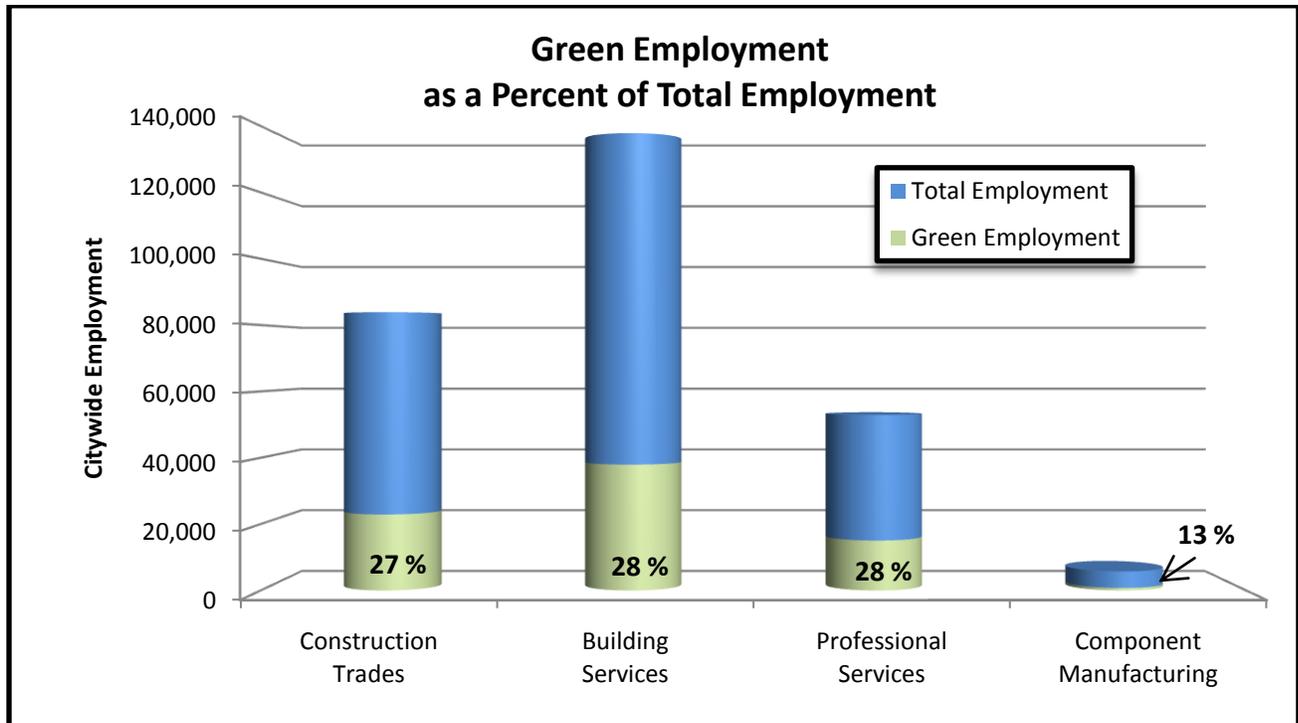

Component Manufacturing is the smallest of four clusters, with only 80,450 workers. This cluster also has the fewest green workers (5,360) and has the lowest incidence of green employment (7%).

¹ For the purpose of this study, *green workers* are defined as workers "primarily engaged in producing green products or services."

² The Professional Services industry cluster excludes legal services.

New York State Green Jobs Survey Finding #2: Green Employment

New York City, by Industry Cluster, for 2010 4th Qtr

Citywide	Construction Trades	Building Services	Professional Services	Component Manufacturing
Green Employment	22,900	37,940	15,050	760
Cluster Employment	83,880	137,840	52,910	5,750

Over 75,000 green workers in these four clusters are employed by firms located in the five boroughs.

Spotlight: New York City Building Services

In New York City, the Building Services cluster is composed of 137,840 total workers. It is estimated that 28% (37,940) are green workers - a slightly lower incidence than Building Services statewide (31%).

With a regulatory environment in New York City that encourages green practices in the Building Services Industry, one might expect a higher percentage of green employment. However, there is a lag in green activity by the small³ employers that encompass 96% of the firms and account for 46% of the employment in Building Services in New York City.

Only 13% of small firms in New York City report engaging in green economic activities, a lower share than otherwise comparable larger employers (29%). Also, these small firms were less likely to engage in green economic activities than similarly-sized Building Services firms across the rest of the state (19%).

³ Fewer than 25 employees
